

PULSE — From findings to fuses

Run PULSE before you ship.

- Fail-closed invariants (I2-I7) + CI enforcement + audit.
- Quality gates (Q1-Q4): RAG, consistency, fairness, SLO (p95 & cost).
- Offline, archived logs; report-card + badges; YAML profiles.
- RDSI stability; Δ with Newcombe CIs (Wilson CIs for components).

Quickstart: drop the pack → run → enforce → ship.
